

# Unified Oracle Cerner Print Management

## CHALLENGES

Printed healthcare documentation, from physicians' orders and patient wristbands, to intake paperwork, all play a vital role in the health and safety of those seeking care. Despite its importance, printing in a healthcare setting comes with many challenges.

**Costs:** Hospitals often pay for additional software, servers, and VPN licenses to address the requirements of both Oracle Cerner and general office printing. And with so many software solutions, visibility into print costs is severely limited.

**Management Complexity:** EMR and general office printing run on different systems and servers, creating inefficiencies for the IT admins who manage them and the clinicians who need to print.

**Print Security:** Since Oracle Cerner print jobs go straight to the printer, documents can sit unattended in the output tray and result in confidentiality breaches.

**Complicated Reporting:** To view printing activity, admins must pull and compile data from Oracle Cerner, front office, and general print solutions, adding to the complexity of reporting.

## PrinterLogic Customers See Healthy Results

91%

of healthcare customers see 100% ROI or more from PrinterLogic software.

70%

of PrinterLogic customers spend less time on print management.

66%

of customers reduced print-related helpdesk calls by more than half.

“Now that we use PrinterLogic, we can push one update and it will be automatically taken care of across all servers and printers. Our deployment time for new printers is incredibly fast—we just push once, and it's done.”

**Craig Myers**  
Senior Technical Specialist,  
Ohio Health

## KEY BENEFITS

### Centralize Management

Manage print administration for clinical and front office staff in one place.

### Advanced Reporting

Get visibility into when, where, and how often users are printing.

### Device Agnostic

Manage all devices and printers, regardless of make or model.

### Everyone Can Print

Get access for all users to print, from clinical staff to visiting doctors.

## Take Control of Your Whole Print Environment

### Print Security

Empower users to release print jobs at their desired printer via QR code, badge, web browser, or login credentials with Secure Release Printing.

### Unified Print Management

Manage both clinical EMR and general office printing from a single pane of glass.

### Lowered Costs

Reduce infrastructure, simplify management, and cut costs by eliminating unnecessary print servers and the need for multiple solutions.

### Elimination of VPNs

Allow remote clinics and contracted parties to print from anywhere with secure Off-Network Printing and get rid of expensive and complex VPNs.

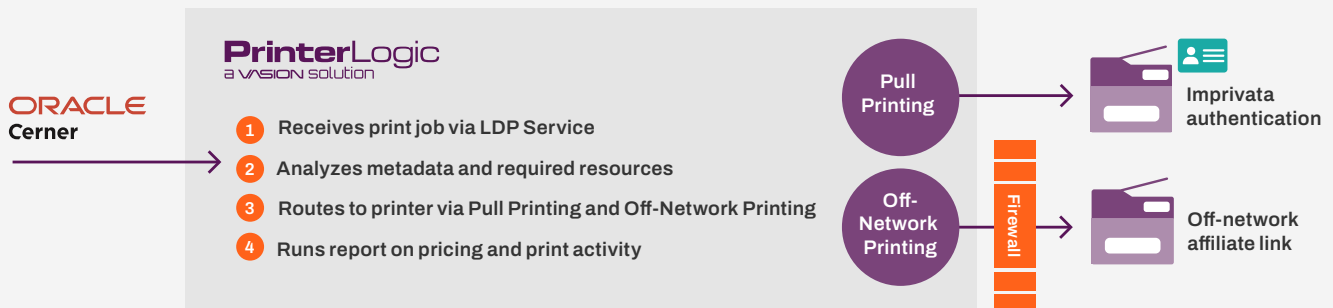

### User-level Reporting

See who printed what documents from Oracle Cerner, or from a user's workstation, all in one place.

### Integration With Imprivata

Extend the security benefits of SSO and MFA, and boost the protection of PII and PHI with seamless Imprivata integration..

## How PrinterLogic Works With Oracle Cerner

**FIGURE 1:** Oracle Cerner sends the print job to PrinterLogic via LPD, enabling users to print via Off-Network or Pull Printing. The centralized interface gives administrators full control over drivers, queues, and servers.

### Additional PrinterLogic Features

- Secure Release Printing
- Off-Network Printing
- Mobile Printing and Release
- Advanced Reporting
- Self-Service Printer Installation
- SaaS or On-premises
- Badge and QR Code Release
- Printer Monitoring & Alerts (SNMP)
- OS-Agnostic Support
