

Thinking about migrating your print servers to the cloud?

# DON'T MIGRATE, ELIMINATE!

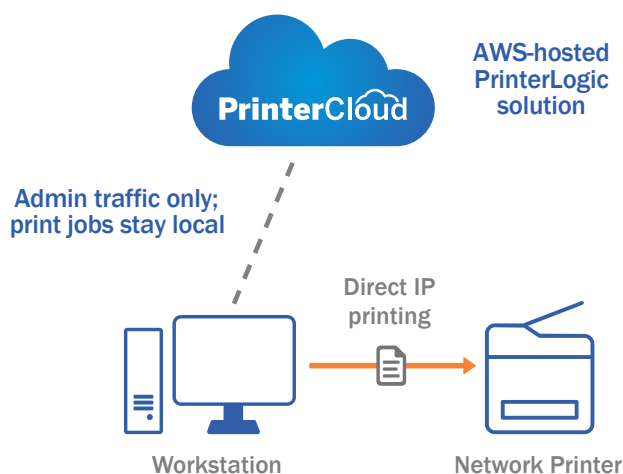

## Print Server Migration Without PrinterLogic

- Transfers outdated technology to the cloud or requires keeping branch office servers.
- Continued cost of maintenance/licensing.
- Single point of failure when print server or VPN connection becomes unavailable.
- Print jobs leave the local network.
- Uses GPOs and scripting to deploy printers.
- Server-based printing = more help-desk calls.

## Print Server Elimination With PrinterLogic

- Serverless PrinterLogic solution hosted in proven, secure AWS infrastructure.
- Centrally managed direct IP printing.
- Printer and driver management, including targeted deployment via AD.
- Empower employees with self-service installation, mobile printing, pull printing.
- Supports Windows, Mac, Linux OS.
- Dramatic reduction in support costs.

In a digital transformation, printing can become an afterthought. With a cloud migration, legacy, server-based printing architectures become even more complex. Whether you're planning a full migration, a hybrid approach, or are starting fresh, PrinterLogic makes it easy to leave print servers behind in favor of a centrally managed direct IP printing architecture. Why do a lift-and-shift migration? Instead, embrace a holistic cloud strategy and employ a modern serverless printing platform.
