Advanced Security Bundle

Q: **What's included in the Advanced Security Bundle?**

The Advanced Security Bundle includes Secure Release Printing (pull and secure), Mobile App Print Release, Off-Network and Off-Network Cloud Printing, Offline Secure Release, and Concurrent (Multiple) IdP Support.

Core Print Management Features		
✔ Printer Object Management	✔ Support Windows, Mac, Linux, & Chrome OS	✔ Role Based Access Control
✔ Printer Driver Management	✔ VDI Support (Citrix, AVD, Horizon)	✔ Administrative Auditing
✔ Print Job Management	✔ All Print Manufacturers Supported	✔ Print Job Reporting & Analytics
✔ Driver Profile Management	✔ Mobile Direct IP Printing (iOS & Android)	✔ Printer Monitoring & Alerts (SNMP)
✔ Self-Service Installation Portal	✔ Print Server Data Migration Utility	✔ Identity Provider Integration (Single)
✔ Printer Driver Deployment	✔ Data Warehouse & BI Integration	

Additional Features

Advanced Security	Output Management	Cost Management
✔ Secure Release Printing	✔ EMR/EHR Support (Epic, Cerner)	✔ Print Quota Management
✔ Mobile App Print Release	✔ ERP Support (SAP)	✔ Client Cost Management*
✔ Concurrent IdP Support (Multiple)	✔ Rules & Routing*	✔ Rules & Routing*
✔ Offline Secure Release Printing		
✔ Off-Network Printing		
✔ Off-Network Cloud Printing*		

*Coming Soon

For a quick overview of the benefits, see our Advanced Security Bundle Solution Brief.

Q: **How can PrinterLogic help me secure my organization's print environment?**

Today's IT security concerns span a variety of topics, which are addressed in detail in our Advanced Security Executive Briefing. Securing your environment starts with PrinterLogic's core benefits of eliminating print servers (which reduce attack surfaces) and providing support for today's cloud-based Identity Providers. Additional benefits are outlined in the diagram and in the executive briefing linked above.

Q: **How is PrinterLogic licensed?**

PrinterLogic is licensed per print queue. A printer with multiple configurations with a separate queue for each will require each unique configuration to have its own license. PrinterLogic's core functionality can be enhanced by adding "bundles," including Advanced Security, Output Management, and Cost Management. These bundles can be added individually or in combination based on your needs. See our Licensing and Pricing FAQ for more details.

Q: **How are Control Panel Applications deployed to my printer fleet?**

PrinterLogic Control Panel Applications are specific to your printer or MFD brand and are installed using the Admin Console. This can be done individually or en masse using the CPA Manager, which is a tool used to install a Control Panel Application (CPA) on multiple printer objects at one time. In addition, it provides a status overview of each printer with a CPA across each Service Client. See a list of supported printers here.

Q: **What if I don't need to license all of my printers for Secure Release?**

The Advanced Security Bundle (ASB) is licensed 1:1 with your core license count. This is more cost-effective compared with earlier per-printer licensing for just one feature. Keep in mind the ASB offers far more functionality than just Secure Release Printing. With the addition of Off-Network Printing and support for multiple IdPs, the bundle helps enable a Zero Trust Network Architecture and helps you support new workforce trends such as remote workers and contractors.

Q: **We're moving away from badge release. What do you offer that is more cost-effective?**

We offer other methods of releasing print jobs, such as using our PrinterLogic Mobile App and QR code release, which are cost-effective and involve less infrastructure. In addition, these methods don't require a CPA on the printer. The user simply releases the job from the app or scans a QR code to identify the printer, all completely touchless.

Q: **Why is Mobile Printing included in the core feature set, while Mobile App Release requires the Advanced Security Bundle?**

The core functionality for PrinterLogic has always included direct IP printing for major endpoint operating systems. We added iOS and Android support last year—continuing the tradition of being OS-agnostic when it comes to user devices. Mobile App Release, on the other hand, is part of the Secure Release Printing feature set, which is only available through the Advanced Security Bundle.

Q: **Other than print job release, does the Mobile App offer any other benefits?**

Yes, two. First, it does not require that a printer CPA is installed on the target printer. It is nearly as convenient for a user as badge release (fast, always available), but even works on a less expensive, simple network printer without the extra cost of badge readers. Second, it has a QR code feature that makes it very easy for users to identify where they want to receive their print job.

Q: **What printers does Secure Release support?**

See our list of supported printer models here. You can search and filter by manufacturer and CPA version.

Q: **Does PrinterLogic offer pull printing?**

Yes. PrinterLogic's secure printing functionality includes both pull printing and Secure (targeted-device) Release Printing. See our Secure Release Printing White Paper for more details.

Q: **How can Off-Network Printing benefit my organization?**

Any organization that has remote or contracted users needing to print onto your secure network can find an easy and secure solution with Off-Network Printing.

PrinterLogic's Off-Network Printing allows end users residing on any network to easily print to devices behind an organization's firewall. Off-Network Printing is the solution for any organization looking to:

- Enable Zero Trust networks
- Accommodate onsite contractors who are limited to a guest network
- Enable printing for remote workers
- Allow printing for business affiliates or clinics

See our Off-Network Printing White Paper for more details.
