5

Ways Going Digital Improves Patient Experience

It's time to shift away from paper

and towards digital document management, but you know it's a heavy lift. You may have implemented some digital processes, but fear the full transition will interrupt day-to-day operations and inevitably, patients' experiences.

Prioritize patient care by going digital. **The transition away from manual to automated processes streamlines back-end operations to eliminate time-consuming tasks, giving your employees the time back to focus on patient care.**

Improve patients' experiences by upgrading the function of your healthcare facility and implementing these five digital processes, with Vasion Suite.

Here's how you do it.

Stay Secure and Compliant with Clear Visibility

Streamline Intake Processes with eForms

We all know the inconvenience and hand cramps that accompany filling out excessive forms. Ink smudges, lines too small to list your full address, and what feels like hours (and might actually be) spent filling out endless pages of repetitive information. And then your team has to manually input all of that data in too many different systems.

Make it easier to intake and share data between facilities using intuitive electronic forms (eForms). Vasion eForms pull and push data between multiple systems to speed up the intake process. Patients can complete intake prior to a visit, which helps them avoid re-entering duplicate data or missing a required field. Your staff will save time and increase efficiency knowing they have the right information, while correctly routing it to the next step. All without a clipboard.

Intake with ease using eForms for:

- New patient forms
- Consent forms
- Lab requests
- Medicare acknowledgements
- Case documents
- Prior authorization
- Fee agreement
- Discharge forms
- Medical information approval
- Trial enrollment
- Transition of care documents

Speed up and simplify the intake process using intuitive and customizable eForms.

Gather eSignatures From Anywhere

2

With eForms comes **eSignatures**. What good are speedy eForms if users can't also electronically sign on the dotted line? Staff can collect consent with eForms, data requests, procedure agreements, prescriptions, treatment plans, and more with only a few clicks. Rather than requiring initials on each stipulation, printed names, and wet signatures on every page, consent can be given immediately from anywhere using a smart device. And eSignatures through Vasion Suite are legally binding.*

The convenient way to sign just checked in. Say goodbye to that basket of pens on the reception counter and time wasted printing and faxing excessive paperwork for wet signatures.

Collect legally binding consent immediately with eSignatures.

69%

of respondents will continue to choose eSignatures over in-person signing post-pandemic.

- Forbes

22,000

hours saved annually.

- Forrester

*eSignatures completed within Vasion Suite are legally binding and complies with the ESIGN Act and Uniform Electronic Transactions Act (UETA).

Automate Your Manual Processes

3

Every second counts when caring for a patient, but you're wasting endless time on manual tasks spanning multiple staff members, departments, and facilities to complete. What took a dozen disconnected systems can be automated with one solution.

You no longer have to micromanage documents, anxiously double-checking if recipients received sent files or signed time-sensitive documents when using [Workflows](#) from Vasion Suite. Create custom, automated routes for key documents and data to digitally flow between patients, providers, systems, and facilities, automatically sending and managing tasks for all users.

Nobody wants to lose time faxing, emailing, printing, and entering data by hand. Automate your workflows so employees can focus more on patients.

11 million
business transactions
automated **every single day**
across Vasion products.

**Transform time-consuming manual
tasks into automated workflows.**

Simplify Use With Document Management

When your processes are confusing for users to navigate and find the data they need, care is postponed. No one wants to make multiple calls, search through a jam-packed filing cabinet, or flip through dozens of pages to find a key data point. You're probably exhausted just thinking about it all.

Document Management with Vasion Suite houses all your digital documents in one convenient space that can be accessed at any time, from anywhere, and only by authorized users. Staff can search, store, and share data in seconds within one secure system.

Moving to digital documents improves employee productivity, decreases time spent tracking down errant paperwork, strengthens patient relationships, and it's just easier.

**Access and relay
patient data in seconds.**

“DRC made the switch to Vasion software two years ago to replace selected legacy document management systems for its clients. DRC is now moving ahead with plans to replace all legacy systems with Vasion software to support customer document archiving requirements and key service bureau back-office workflow functions.”

Barry Braun

Stay Secure & Compliant With Clear Visibility

Working in healthcare requires the protection of confidential data. Paper files are vulnerable to physical damage, human error, and misplacement. You can't afford those kinds of mistakes.

Store digital documents and data securely with Vasion Suite. Protect your files using internal and external secure access with document-level encryption and apply Personal Identifiable Information (PII) settings to particularly sensitive documents and folders. Gain clear visibility with detailed audit reports on all activity while complying with HIPAA, data breaches, false claims and whistleblower suits, and antitrust issues.

Protecting data and regulating compliance doesn't have to come at the cost of time away from patient care. Vasion Suite keeps your digital documents accessible and secure.

Store data securely without manual oversight or compliance risks.

61%

of healthcare data breach threats come from negligent employees.

- Astra

51%

of healthcare organizations reported an increase in data breaches since 2019.

- Astra

80%

of the reported healthcare breaches by the U.S. HSS were accounted for by hacking, while 15% was accounted for by unauthorized access.
