VASION ®

Manage Critical Processes with SAP

Challenges

Organizations need reliable document processing and printing to keep their businesses running. Legacy systems and disconnected processes create bottlenecks that impact decision-making and operations. As businesses scale, they face hurdles that increase costs and reduce productivity. Downtime and disruptions add compliance risks and compromise data security.

Vasion Output addresses these common challenges:

- **Data and Security Risks:** Fragmented workflows slow information retrieval and create reporting inconsistencies.

- **Downtime and Disruptions:** System maintenance, technical issues, and hardware upgrades can lead to delays in critical operations and compliance issues.

- **Lack of Scalability:** Outdated infrastructure, paper processes, and print servers increase maintenance costs and limit growth.

- **Disconnected Systems:** Information silos make it hard to unify data management and lead to fragmented insights and inconsistencies.

VASION CUSTOMERS SEE REAL RESULTS

70%
of our customers spend less time on print management.

66%
of customers reduced print-related helpdesk calls by more than half.

97%
average Customer Satisfaction Score (CSAT) for Vasion.

How Vasion Output Works with SAP

SAP

Load-balancer routes job to the VO Service Client

1. Receives print job via RESTful API
2. Analyzes metadata and stores job temporarily for redundancy
3. Routes to printer via direct IP, Off-Network Printing, or Secure Release Printing
4. Registers print activity within Reports

VASION OUTPUT

Direct IP

Secure Release Printing

Off-Network Printing

IdP authentication

Firewall

Off-network location

Figure 1. SAP sends the print job to the RESTful API, enabling users to print via Off-Network or Pull Printing. The centralized interface gives administrators control and visibility over printing.

Automate Critical Processes with Vasion

✦ Seamless SAP Integration

Connect SAP to Vasion Output for enhanced control and visibility into critical print jobs. Build a redundant environment with automated rules to ensure uninterrupted delivery.

✦ Document Conversions

Convert documents to PDF, XML, HTML, and other file types. Send and receive documents in preferred formats.

✦ Confirmed Delivery

Eliminate uncertainty and know when documents reach their destination with real-time status updates.

✦ Rules & Routing

Create documents and manage routing across your environment with rule-based automation, enhancing efficiency and reliability in your critical print from SAP.

✦ Output Console

Control and monitor all printing from one unified interface. View received, retained, or failed jobs and take action directly.

✦ Batch Printing

Print pre-defined document groups in specific order, keeping complex processes efficient.
