

Simplify Scan Management and Document Collaboration

Your Current Scanning Process Is Inconvenient

Paper documents limit accessibility for remote employees and hinder team collaboration. To digitize and share documents, employees must scan and save files to their workstations, then attach them to emails or upload them to shared drives. This manual process creates opportunities for human error and potential data loss.

As an IT admin managing a mixed fleet environment, you're likely juggling multiple scanning configurations, device health monitoring, and user access controls—all while safeguarding sensitive document processes. Your hybrid workplace needs a more secure way to collaborate and a simpler way for you to manage and track everything. Simplified Scanning makes this possible.

“I love [Vasion Print (formerly PrinterLogic)], it helps centralize everything I need while also providing new innovative ways to keep the company up to date with printing.”

Cara Wise, System Administrator III, Simmons Bank

★ KEY BENEFITS

Engage the Hybrid Workplace

Equip all employees to scan paper documents and share them digitally through email, text, network folder, and cloud storage locations.

Simplify Employee Enablement

Deploy at every printer in your environment from one management console.

Secure Digital Documents

Digitize, encrypt, and store documents with configurable security settings to prevent theft and data loss.

Capture Documents Wherever

Scan documents into readable digital files from the Vasion App, on the go.

VASION CUSTOMERS SEE REAL RESULTS

70%

of our customers spend less time on print management.

66%

of customers reduced print-related helpdesk calls by more than half.

97%

of customers are likely to recommend Vasion Print.

Enhance Scanning Capabilities for Your Entire Organization

Simplified Scanning lets you manage security and user activity for all your devices from one central console across multiple manufacturers. End users can scan documents and send them instantly by email or save them directly to the storage.

Core features of Vasion Print SaaS include Scan to Email, Scan to Storage, and Mobile Scanning with the Vasion App.

- ✦ **Intuitive CPA Interface:** Standardize the scanning experience for end users across print manufacturers with the embedded Vasion Control Panel Application (CPA), so there's no confusion or need for retraining for scan per MFD.
- ✦ **Centralized Management:** Administrators can manage their entire print and scan environment with the Administration Console, allowing them to manage all MFDs, user groups, and activity in one place.
- ✦ **Support for Zero Trust:** End users must authenticate their identities via username credentials with a PIN or with a badge swipe before scanning every time.
- ✦ **Mobile App Scanning:** The Vasion App lets employees scan documents with their mobile device wherever and whenever they need.
- ✦ **Flexible Storage Options:** Employees can scan and send digital files directly to designated cloud storage folders in Google Drive, Box, OneDrive or SharePoint—or to local network drives for better accessibility in a hybrid workplace.
- ✦ **Monitor Scanning Activity:** Access all scan activity based on device, user, group, or department within the Admin Console.

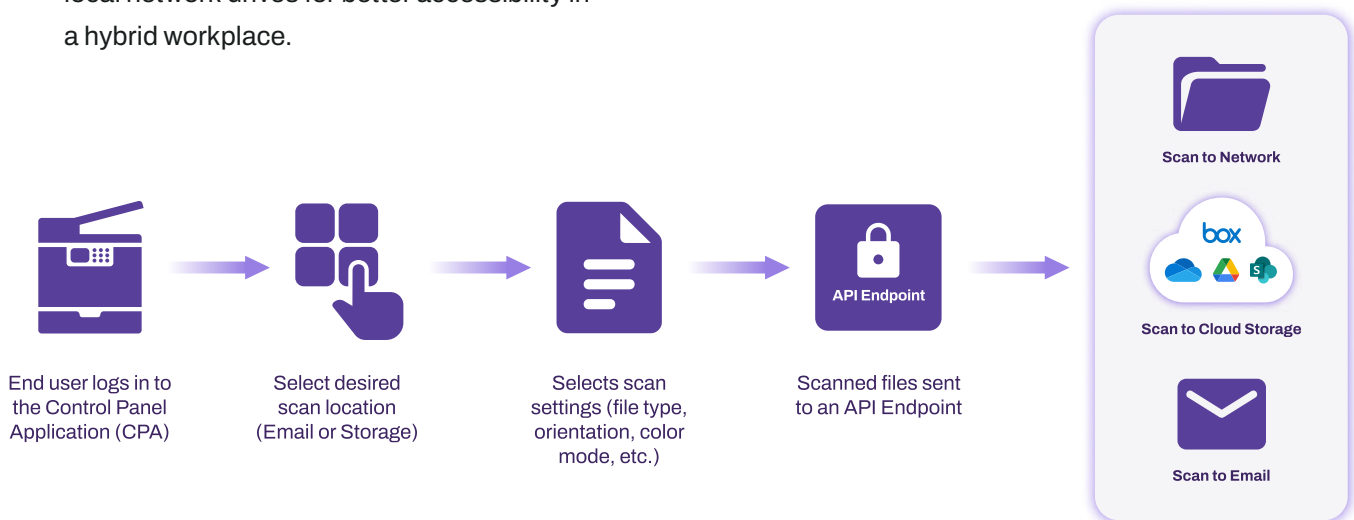

Figure 1: Log in to the CPA on your MFD and send documents to recipients via email or to storage folders.
