

Unlock Printing With Output Automation's API Print Service

Lack Of Printing Leaves You Disconnected

Your web-based or home-grown applications may not natively connect to your printers—leaving you scrambling for a different solution. You're stuck manually connecting to print from your application, which is time-consuming and daunting on top of your daily priorities.

Ditch Printing Hurdles

You've tried and failed to establish workarounds to direct documents from your business systems printed in a series of document exports, storage saves, and manual routing. There's a better way to achieve your printing goals with a printing API that saves you time, money, and headaches. Simply grab the file, send an API post request, and the rest is automated.

“[Vasion Print (formerly PrinterLogic)] allows for a unified printer management system for all of our environments.”

Peter Burman, Director of IT, Tennessee Aquarium

KEY BENEFITS

Establish Seamless Connection

Bridge your disconnected web-based applications and printers with a seamless API connection.

Unify Document Management

Enhance outdated document delivery processes with document routing automation, remote printing, centralized management, and more from one platform.

Flexible Configuration

Tailor the connection to your printers with flexible deployment and hosting options that fit your environment's requirements.

Ensure Business Continuity

Initiate highly available printing processes regardless of printer failures or downtime, to protect critical operations.

OUTPUT AUTOMATION CUSTOMERS EXPERIENCE SEAMLESS DOCUMENT MANAGEMENT

97%

of IT decision-makers say process automation is imperative to digital transformation.

Enhance Your Business Process Capabilities

*The ability to route documents to digital storage or email will be available soon.

The API Print Service extends Vasion Output Automation capabilities to your web-based applications. Previously your applications may not have had native printing capabilities. Now you can easily connect your systems and enjoy Vasion Output Automation's full functionality with centralized administration, robust document reporting, rule-based document automation, and more.

✦ Remote Printing

Leverage Off-Network Printing capabilities to route documents securely over public networks between the API Print Service and your printer.

✦ Zero Trust Support

Adopt Zero Trust initiatives across your systems with secure and remote printing features that require user identity authentication before receiving printed documents.

✦ Rule-based Document Routing

Automate document management based on predetermined rules to increase the efficiency and reliability of workflow tasks.

✦ Enhanced Security

Protect sensitive documents during transmission and storage to ensure only authorized access, utilize detailed audit trails, and implement secure remote printing.

✦ Unified Systems and Applications

Bridge the disconnect between print and document systems by unifying management in a single console and ensure that critical workflows continue without interruption.

✦ Increased Print Efficiency

Automate document routing, formatting, and delivery to reduce the time and effort required to manage critical document workflows.

Interested in easily unifying print across your enterprise systems and increasing efficiency?
