Unlock Printing With Output Management's API Print Service

Lack Of Printing Leaves You Disconnected

Your web-based or home-grown applications may not natively connect to your printers—leaving you scrambling for a different solution. You're stuck manually connecting yourself to print from your application, which is time-consuming and daunting on top of your daily priorities.

Ditch Printing Hurdles

You've tried and failed to establish workarounds to direct documents from your business systems printed in a series of document exports, storage saves, and manual routing. There's a better way to achieve your printing goals with a printing API that saves you time, money, and headaches. Simply grab the file, send an API post request, and the rest is automated.

"PrinterLogic allows for a unified printer management system for all of our environments."

Peter Burman, Director of IT, Tennessee Aquarium

Enhance Your Business Process Capabilities

The API Print Service extends PrinterLogic Output Management capabilities to your web-based applications. Previously your applications may not have had native printing capabilities. Now you can easily connect your systems and enjoy Output Management's full functionality with centralized management, user-level print reporting, rule-based document automation, and more.

✦ **Centrally Managed Administration:** Manage all your printers and print activity from a single, web-based console for greater control and visibility into your document processes.

✦ **Remote Printing :** Leverage Off-Network Printing capabilities to route documents securely over public networks between the API Print Service and your printer.

✦ **User-Level Reporting:** Gain visibility into all document activity, including who is printing, the end destination, the time of print, document attributes, and more.

✦ **Rule-based Document Routing:** Automate document management based on predetermined rules to increase the efficiency and reliability of workflow tasks.

✦ **Zero Trust Support:** Adopt Zero Trust initiatives across your systems with secure and remote printing features that require user identity authentication before receiving printed documents.

✦ **Simple Interface:** Experience an easy configuration process with a simple administrator interface—a vast improvement over other Output Management solutions.
