VASION ®

Streamline Document Processes with AI

Manual Data Processing is Slowing You Down

Extracting information, redacting sensitive details, and sorting documents shouldn't take up your workday. Without automation, these tasks become time-consuming bottlenecks. Every hour spent sifting through files and reviewing content for compliance is time taken away from higher-priority projects.

Free yourself from the manual effort of:

- Extracting and mapping data from scanned documents
- Identifying and redacting Personal Identifiable Information (PII)
- Processing and sorting photos
- Transcribing handwritten documents into digital files
- Managing long content review processes
- Reviewing content for compliance

"Vasion is the best DMS we've reviewed. It's a single, easy-to-use source that maintains control for all staff, with quick and easy access whether they're in or out of office."

Alan Nusbaum, President & Project Manager, Connectis

Effortless Document Handling
Extract and structure key data from documents instantly to save time and reduce errors.

Stronger Compliance & Security
Automatically detect risks in communications to protect your organization.

Simplified Data Privacy
Identify and safeguard sensitive information, reducing compliance risks and manual review efforts.

Faster Image Processing
Streamline photo organization and management with automated face recognition.

Automate Document Processing
Integrate AI-driven data extraction, redaction, and classification into seamless, automated processes with built-in approvals and routing.

Ditch the Manual Work and Automate Document Handling with Vasion

Managing data and security doesn't have to be complicated. With Vasion and Amazon's AI-powered tools, you can automate image processing, simplify document handling, and streamline compliance. Whether it's detecting risks in communications, protecting sensitive information, or extracting key data, these AI-driven tools empower your team to work smarter, not harder.

Multi-Language Support: Process and extract text in multiple languages, ensuring accessibility and improving operations across global offices.

Textract Endpoints: Securely process high-volume document extractions through dedicated API endpoints, enabling scalable and efficient automation.
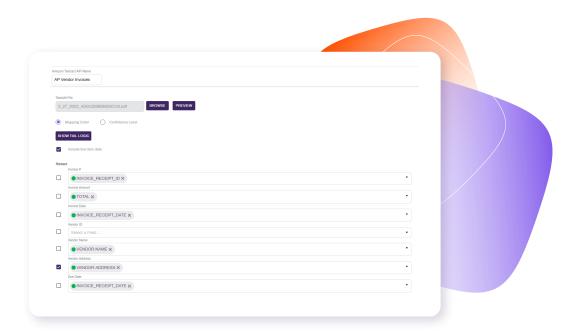

Photo Indexing: Improve searchability and organization by detecting, analyzing, and categorizing faces in images with Amazon Rekognition.

Document Routing: Instantly classify and distribute scanned documents using AI-powered text and form recognition, and trigger the right workflows.

Advanced Content Validation: Improve security and regulatory adherence by scanning and flagging sensitive, inappropriate, or non-compliant content in documents with Amazon Bedrock Guardrails.

Intelligent Data Extraction: Accurately extract text, handwriting, tables, and other data from uploaded documents using Textract's machine learning and implement into automations and workflows.

Data Validation: Configure character recognition confidence levels and success/failure logic to process and validate data seamlessly, ensuring accuracy before integrating into workflows or storage.

Stop wasting brainpower on manual tasks, automate them with Vasion instead. Schedule a demo and experience the power of AI-driven automation.
